TECHNICAL SKILLS

Java	Angular
Spring Boot	Postgres
Maven	Oracle
GitLab / GIT	NodeJS

PROJECTS

SFR - OSS

OSS handles network operations and ensures that the telecom network runs efficiently. It includes tools and software that help in managing and controlling network resources, ensuring service delivery, and monitoring performance.

Technology: Java, Spring Boot, Postgres, GitLab CI/CD, SonarQube

- Led technical conception and solution design, translating requirements into actionable plans and driving improvements within the project.
- Involved in GitLab CI/CD pipeline integration, streamlining build, test, and deployment processes for faster and more reliable releases.
- Drove code quality initiatives through code reviews and SonarQube static analysis.
- Guided and mentored the team, ensuring the delivery of high-quality results and fostering continuous development.

MAPLE Search

Application that allows users to search for materials and formulae based on user preferences globally. It also enables the comparison of selected formulae or materials and their addition to a workbench or shopping list.

Technology: Angular, Java, Spring, Oracle, Postgres, Elasticsearch, GitLab CI/CD, SonarQube

- Mentored the team and supported them in securing the quality of the deliverables.
- Took initiatives in providing technical improvements within the project.
- Proactively conducted incident reviews and RCA sessions, driving continuous improvement and risk mitigation across the team.

Digital PRIME

Application that allows a global organization to account for all the oil reserves belonging to its various subsidiaries in order to ensure external communication to the group.

Technology: Angular, Java, Spring, Oracle, GitLab CI/CD, SonarQube

- Took full ownership of the team's contribution to all phases of the project lifecycle, from initial concept to final implementation.
- Responsible for the development of RESTful services using Java Spring Boot.
- Designed and developed UI components and web services.
- Responsible for a test-driven approach covering all business scenarios.

Receiving Inspection

Medically validated application developed to examine and inspect purchased materials/products upon receipt from suppliers.

Technology - Angular, Java, Spring Boot, NodeJS, Postgres, Oracle

- Responsible for the development of APIs that processed streaming data.
- Documented the complete functional scope of this medically validated application.
- Worked within an Agile team and helped prioritize feature requests within the scope.
